

SONOMA STATE UNIVERSITY STEVENSON HALL RENOVATION

1801 East Cotati Avenue, Rohnert Park CA 94928

February 19, 2021 | WEEKLY NEWSLETTER

Check out what's going on!

Our Focus

This week has been centered around removing the exterior sealant of the building and other hazardous materials. This is part of the overall demolition and abatement of the building which lays the groundwork for the building renovation.

Cleanliness is Godliness

Keeping the interior spaces clear and clean in the building is incredibly important for maintaining a functional workspace and is one of our top priorities on the job site. Interior demolition debris is pictured here on the right for off haul and disposal. Thank you to Silverado for maintaining a clean work site!

Demolition is the Name of the Game

Notice the man in the background performing detailed demolition and more structural upgrades in an elevated work platform and the East Stairs that create nice visual symmetry. Excellent guardrails line the stairs for safety. These stairs will remain for the duration of the project.

“ WE’RE ENJOYING GETTING AWAY FROM THE CITY AND WORKING IN THE FRESH WINE COUNTRY AIR. EXPERIENCING THE DUALITY OF TEARING DOWN BUILDINGS WHILE AT THE SAME TIME BUILDING BACK FRIENDSHIPS. ”

JOSH EDWARDS SILVERADO

Reuse & Recycle

All the material is cleaned up by the rust orange excavator to be recycled. Many metals can be recycled without degrading their natural properties. Metals have a high value, creating an incentive to recycle in addition to environmental benefits. Steel, pictured here, is the most recycled metal on the planet!

Safety, Safety, Safety

Truebeck sets up a temporary safety guardrail where an old wall panel had been removed, preventing a potential fall off the second floor of the building. Safety is the #1 priority. This ethic is echoed in our attitude, team dynamic, daily meetings, and how we approach work on site.

Everyone Has A Purpose

The man in the orange vest is fulfilling a crucial role for worker safety and for the smooth functioning of the site. He is acting as a spotter as material is cleaned up, making sure that equipment has a clear path to execute its job.

Let There Be Light

Stevenson Hall used to be enclosed with little light entering the space, making the experience in the building less connected to the outside world. Ripping out the old makes space for the larger new windows that will connect the inside and outside.

Stay Tuned for Next Week!

We will be gearing up for hazardous material clearance on the ground level, allowing us to start detailed demolition and paving the way for the structural upgrade. Yeehaw!
